

Employee Attrition Report — HR Executive Summary

Purpose

This analysis identifies why employees leave the organization and highlights actionable signals for HR teams to improve retention.

Key Findings

- Employee attrition is strongly linked to workload pressure, compensation, and early career stage.
- Frequent overtime significantly increases the likelihood of employee exit.
- Lower compensation groups show higher turnover rates.
- Employees in first 3 years are most likely to leave the organization.
- Certain roles experience higher attrition due to job pressure and satisfaction gaps.

Key Drivers of Employee Exit

- Frequent overtime and workload pressure
- Lower salary levels compared to peers
- Early-stage employment (0–3 years)
- Poor work-life balance

HR Recommendations

- Reduce overtime and improve workload distribution.
- Strengthen onboarding and early-career support programs.
- Improve work-life balance policies across high-pressure teams.
- Focus retention efforts on high-risk job roles.

Limitations

The analysis is based only on structured HR data and does not include behavioral, psychological, or external market factors.

Conclusion

Employee attrition follows clear patterns driven by workload, compensation, and early tenure experience. Addressing these factors can significantly improve retention.
